June 2026

EDUCATION

- **Perm State University** Perm, Russia
Not completed, Sep. 2013 – Jun. 2015
Master of Science in Finance and Information Technology.
Researched financial-market bubbles using LPPL models
and studied systemic risks in the European banking system. CFA Institute Research Challenge 2014
participant.
- **Perm State University** Perm, Russia
Graduated in Jul. 2012
Specialized in Computational Fluid Dynamics.
Researched convection of liquid ternary mixtures in connected channels.

EXPERIENCE

- **Microsoft** Dublin
Senior Software Development Engineer, OMEX April 2024 – Present
 - **Software Engineering:**
 - * Architected and launched a secure CI/CD pipeline for Word Web components, embedding compliance gates and eliminating manual release steps to accelerate delivery cadence.
 - * Built telemetry and dashboards for binary-size and performance guardrails, enabling proactive regression detection across every pipeline stage.
 - * Led the DWriteCore code/data-reduction effort, shrinking the text-rendering binary by 17% and directly improving cold-boot KPIs.
 - * Designed and analyzed iterative A/B experiments that quantified boot-performance trade-offs of new components, informing investment decisions with session-mix insights.
 - * Prototyped and implemented server-side rendering for Word Web, collaborating with infrastructure team to target a more than 50% boot-time reduction.
 - **Operations:** Own production support for Word Web, triage incidents end-to-end, and drive reliability/root-cause remediations across service teams.
 - **Collaboration:**
 - * Surface team-level productivity blockers and craft learning plans to amplify execution capacity.
 - * Facilitate cross-org syncs to align roadmaps, codify shared practices, and remove dependencies that slow delivery.
- **Microsoft** Dublin
Senior Software Development Engineer, Identity June 2022 – April 2024
 - **Software Engineering:** Designed and developed data pipelines and built telemetry aggregations for partner teams' business-unit analytics. Applied best practices and improved processes.
 - **Operations:** Provided 24/7 on-call support for a data-processing system. Supported partner teams with available telemetry. Addressed legacy gaps and improved system observability.
- **Amazon** Dublin
Software Development Engineer, AWS SES June 2019 – June 2022
 - **Software Engineering:** Designed and developed highly scalable distributed software systems. Implemented software-delivery best practices and improved processes.
 - **Operations:** Supported high system availability and SLA compliance. Mitigated system-wide, high-impact issues.
 - **AWS Security Guardian:** Helped the service team maintain a high application-security bar.
- **Tencoins** Malta
Software Engineer June 2018 – Jan. 2019

- **Software Engineering:** Designed and developed the core of a cryptocurrency exchange service with a microservice architecture. Created cryptocurrency wallets for Bitcoin, Ethereum, and Tether (Omni layer).

• Consulting, Self Employed

IT Consultant

Sep. 2016 – June 2019

- **Consulting in IT:** Researched project domains. Built web services with Django/Django REST, Postgres, AngularJS/ReactJS, and mobile apps with Ionic.

• Votetour

CTO

Mar. 2017 – Sep. 2017

- **Management:** Arranged software-engineering workflows with continuous integration and test-driven development practices.
- **Business Development:** Built B2B relationships between airlines and Votetour.
- **Software Engineering:** Led requirements analysis, architecture, design, and development of a cloud-based platform for tourist collaboration, planning, and booking charter flights worldwide; the platform enabled partner airlines to arrange charter flights for tourist groups.

• Nebulytics

Moscow, Russia

Software Engineer

May 2015 – Sep. 2016

- **Platform Development:** Participated in developing core features for a proprietary SaaS platform. Architected and developed server-side solutions using Java/Groovy/Grails/Python, client-side solutions using JavaScript/jQuery/Bootstrap, and database-side solutions using MariaDB/MySQL/Percona and a proprietary MySQL framework written with C++ macros in version one and Lisp in version two.
- **Consulting:** Led requirements analysis, architecture, design, and development of solutions for company customers using the Nebulytics platform.
- **DevOps:** Tuned load balancers. Configured the Elasticsearch/Logstash/Kibana stack for server performance monitoring. Worked on tools supporting the existing codebase (bash, Perl).

• JSC Prognoz, Center solutions for financial markets

Perm, Russia

Software Engineer

Aug. 2014 – May 2015

- **R&D:** Researched fraudulent activity on the Moscow Stock Exchange. Developed models that helped the regulator (Bank of Russia) investigate money laundering, insider trading, and related cases.
- **Software Development:** Integrated the created models into an existing stock-exchange monitoring application (Delphi/PL/SQL/Oracle Database). Developed a tool for connecting to the Moscow Stock Exchange and receiving transaction data using the FIX/FAST protocol (C++).

• JSC Prognoz, Direction of international development

Perm, Russia

QA Engineer

May 2013 – Aug. 2014

- **Quality Assurance:** Tested mobile, web, and desktop applications, application backends, and REST/SOAP services. Coordinated development teams.

• Scientific Industrial Instrument Making Company, R&D Department

Perm, Russia

Research Engineer

Oct. 2011 – May 2013

- **Measurement automation:** Created test stands for fiber lasers, fiber angular velocity sensors, and integrated optical modulators, enabling automated measurement of optical characteristics using devices such as optical spectrum analyzers, power meters, optical switches, and thermal boxes. Wrote PC-based control and report-generation software (LabView, C#).
- **R&D:** Participated in applied research on fiber lasers as light sources for fiber-optic gyroscopes, metal markers, and fiber-optic amplifiers for telecom purposes. Researched their behavior across a wide range of temperature conditions and under vibration.
Conducted applied research on sensor behavior under temperature changes and theoretical studies of sensor noise using spectral methods.

• Perm State University

Perm, Russia

Physics Department Assistant

Oct. 2011 – Feb. 2012

- **Assistance:** Demonstrated physics experiments.

SKILLS

- **Languages:** Python, Java

Technologies: Distributed Systems, Observability, Linux, CI/CD, TDD, Agile, Microservices, Blockchain, AWS, Performance
